WORK SAFER WITHOUT FOGGING-UP

EYEWEAR ACCESSORIES DESCRIPTION AND COMPOSITION:

The **Antifog[®] | **plus**** Spray prevents fogging, while keeping lenses, visors and other surfaces clean. The anti-fogging spray makes it safer to work in places where temperature changes or over-exertion lead to perspiration, in jobs where steam emissions are present, and when eye and respiratory protection are worn at the same time.

The **Spray** is suitable for all types of materials: Polycarbonate, Organic CR-39 and MR7, Acetate or Mineral. It provides an anti-fogging effect on all types of neutral lenses (non-prescription). In the case of prescription lenses, these should include the **Antifog[®]** coating for optimal anti-fogging results, since the spray will activate the **Antifog[®]** coated prescription lenses.

Fogging is reduced or completely eliminated thanks to the effect of the surfactants the spray contains, which affect the surface tension of the treated area or surface, besides functioning as a cleanser.

Antifog[®] | **plus** stays effective throughout its period of use, even if the surface the Antifog Plus was applied to becomes wet, whether immersed or simply splashed with a bit of water.

It can not only be used with safety eyewear and visors, but also with ordinary glasses (also sunglasses) and other items such as protective panels, computer and mobile phone screens, camera lenses and helmets.

Easy to apply. Precise product flow control.

More than 12 hours of continuous anti-fogging effect.

Estimated duration: Each bottle contains **over 360 sprays** of the liquid.

Safety during use in workplaces where fogging may occur.
